Association for the **P**romotion
of a supply **C**hain **S**ustainable

Objectives

- 1 Crossing from 'green' called design to a **'sustainable'** designed supply chain taking into account economical, environmental and societal aspects
- 2 Creating a bridge between industry and research world

Working themes

- 1 Temporal evolution of **cost**
- 2 **Intermodal** transportation
- 3 Management of **sub products** and/or waste
- 4 Taken into account the **infrastructure end of live**

Results

Tools and models can be directly used on the industrial field

- 1 Models
- 2 Design tools of supply chain
- 3 Structural obsolescence integration
- 4 Generic methodology to supply chain design
- 5 Contribution to marginal cost

Context

Collective awareness of a breakage on access and cost of energy and environmental respect

- 1 Energy prices increase
- 2 Eco-taxes development
- 3 Pressure from EU legislation
- 4 Relocation of enterprises in Europe
- 5 What happens in the future?

Advantages

- 1 **Competitive edge of 15 years**
- 2 Taken into account the tomorrow realities
- 3 Models initiator
- 4 Customizable generic solutions
- 5 Directly usable tools
